1	5	60	20000	800	0.05	≤1	20	6500	210	0.05	≤0.5

Depth of cut

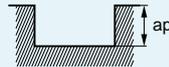

- 1) VQ coating has less electrical conductivity; therefore an external contact type (electrically transmitted) tool setter may not work.  
When measuring the tool length, please use an internal contact type (non-electrical type) tool setter or a laser type tool setter.
- 2) Effective cutting of stainless steel, titanium alloys and heat-resistant alloys etc. can be achieved with the use of emulsion coolant.
- 3) Chattering can still occur if the machine rigidity and clamping method are insufficient.  
In these cases the feed and speed should be reduced proportionately.

## Slotting
